

How to run the five slides

HEAFT · MARKET OPPORTUNITY

~3 MIN 40 S OF SPEAKING

01 “People quit the gym because nobody tells them what to do.”

PROBLEM

PICTURE

One line falling from **Day 1** to **Month 3**: you join → what do I do? → same three machines → gone. Plus **63 of 100**. Nothing else on the slide.

THE POINT

They don't quit because it is hard. They quit because they are **lost** — and being lost is a product problem, so it can be fixed.

IF ASKED

63% — Sperandei 2016, J Sci Med Sport, 5,240 members. If asked whether it is real and not just a statistic: our first three users in Barcelona said exactly this — one could not answer his training goal on day one.

02 “Our goal is the beginner — and 3 million of them start every year.”

WHO

PICTURE

A **positioning map**. Across: just joined → years in the gym. Up: doesn't know what to do → knows. Red corner = no plan, starts and stops. Bottom-right = years in, same three machines. Top-right = the regulars.

THE POINT

Trace both axes **before** touching a dot. Then the dots in order: regulars, same three machines, the red box. End on the number, not the box.

IF ASKED

Exact figure is **2.75M** — say “nearly three million”. It is 39% of Spain's 7.05M members being new each year (HFA 2025: 33.6% attrition + 5.5% growth).

03 “€3B in Europe. €6M is ours.”

HOW BIG

PICTURE

Three circles, outside in. Europe **€3B** · Spain **€300M** · ours by year three **€6M**.

THE POINT

Say the big number, then make it feel easy: €6M is **150,000 subscribers — 5 in every 100 Spanish beginners**. And Spain is only **10% of Europe**, so the room above us is the story.

IF ASKED

Rounded; exact: Spain 282M, target 5.5M, 137,500 subs. EuropeActive / Deloitte 2026 (75.5M members) · Deloitte / España Activa 2025 (7.05M) · RevenueCat 2026 (39.94 median price). **Sources report in USD** — the slides show the same figures in euros, not converted.

04 “Running earns €340M a year. The gym is still open.”

OPENING

PICTURE

Strava **€340M** and MyFitnessPal **€310M**, against three tiny gym bars. Biggest is €40M.

THE POINT

The money in fitness apps is real — it just hasn't been made in the gym yet. **Nobody has built the winner.**

IF ASKED

Business of Apps (MyFitnessPal) · Sacra (Strava) · BusinessWire (Ladder) · Sensor Tower (Fitbod, Hevy). Rounded; the gym figures are analyst estimates, not company disclosures — say so.

05 “Three things that matter. One app has all three.”

ADVANTAGE

PICTURE

A comparison table. Three rows: **writes your plan · food follows training · €10 or less**. Everyone ticks something; only the Heaft column is green all the way down.

THE POINT

Read across each row out loud. **Do not skip the competitors' ticks** — a table where only we score looks rigged, and giving them their row is what makes the middle row land. Then stop.

IF ASKED

Prices rounded from the store listings (9.99 / 3.99 / 15.99 / 11.66 / 199), shown in euros. Future's plan is written by a human. Rows from each company's own store listing, Sep 2026.

While presenting: press **N** for the full script and a “how to read” line on every slide; **F** is fullscreen. Sources are off the slides on purpose — the **full 17-slide study** prints every one of them.
